

## Ferti-Humate™

An organic carbon, water soluble, humic acid granule that acts as a potent catalyst for making soil fertility farming systems work quicker and better. Ferti-Humate™ chelates and holds nutrients (especially high analysis fertilisers) in a loosely charged bond that permits plants to exchange this nutrition for a hydrogen ion as wanted, thereby preventing waste and leaching. It also chelates and holds other Macro and Micro elements which provides a nutrient available and fertile area for root systems, microbes, oxygen and water to interact in a highly productive aerobic environment.

## Use and Recommended Dosage Rates

For Use with Solid Fertilisers down the Tube  
MAP/DAP/SOA/CalNitrate/Urea and Other High  
Analysis Formulations

- 4kg- 8kg per Hectare Standard (as a Solid Fertiliser Adjuvant)
- 10kg-15kg per Hectare for Sandier Soils, Light Loams or any areas where TEC is under 5 or Soil Organic Carbon is under 1%
- 20kg-30kg per Hectare for Salt Affected Patches, Anaerobic Condition, Non-Wetting Sands (contact FTA for further advice)
- 40kg+ per Hectare applied to Salt Affected Areas progressively encroaching on arable land (contact FTA for further advice)

Keep in a Dry Stable Environment. Important to Mix Well for best Effect.

## Ferti-Humate™

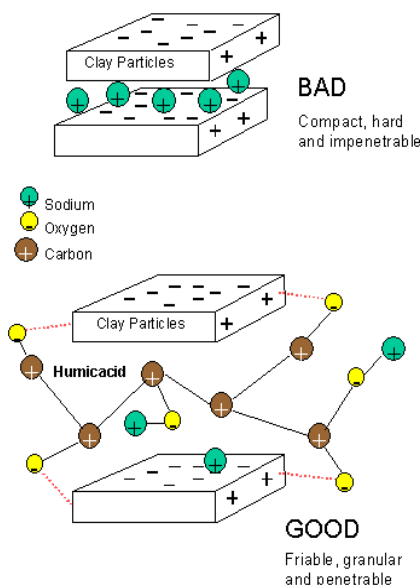

65% Humic Acid  
95% Water Soluble  
2mm-5mm Granule

Larger Root Mass  
(with increased lateral growth and more root hairs) is expected when Ferti-Humate™ is combined with Ferti-Tech Seed Enhancer Nutritional Seed Coating

## Ferti-Humate™ is a Nitrogen Maximiser and stimulates a Cost Effective Biology Performance

- Important Buffer for Ion exchange Nitrogen transfer in the Rhizosphere (avoids Fertiliser Concentrations causing Root Clubbing or Wasted Sideways Growth)
- Holds Nitrogen in Ammonia Form Longer
- Prevents Leaching and prevents NO<sub>2</sub> creation but is a catalyst for O<sub>2</sub> and CO<sub>2</sub> production
- Provides Microbial Food, Harbour and Stimulation
- Stimulates Carbohydrate Secretions from the Root System and aids Humus Formation

Ferti-Humate™ aids aggregation and conductive balance in the soil increasing space and separation between soil particulates. Also, at the same time, acting as a remediation and highly reactive carbon source that can absorb toxins, reverse salt affected patches and aid in the better performance of non-wetting sands.
